

A casing that contains electronic components such as a CD-changer therein is disclosed. As shown in FIG. 1, the casing is composed of a case 2 and an upper cover 5 closing an upper opening of the case 2. On a top plate 15 and a peripheral fringe 16 of the upper cover 5, projected stripes 17 are formed. The projected stripes 17 serve to increase mechanical strength of the upper cover 5 and to accommodate head portions of screws extending from the case 2.
